

# Strengthen your network's weakest link... *your employees.*

Hackers know that the weakest link in any data and network environment is the person at the computer. By clicking on an attachment or link in a malicious email, your employees can inadvertently open your business up to a significant financial loss.

## Introducing **VGM Secure** *Powered by Ninjio*

- Series of animated videos developed to increase your employees' awareness of cybersecurity risks, helping to protect your network against hacking attacks.
- Strengthen your network security by training your employees to be another line of defense.

## I.T. Security Awareness Training Videos

Each animated "episode" is three to four minutes and is professionally designed to engage and educate your employees about cybersecurity threats.

Episodes are based off actual security breaches and real-life situations.

A new episode is released every 30 days, helping to constantly reinforce security awareness.

The interactive production of each episode increases employee engagement with applicable quizzing.
